Compatible ID Card Printers for the ID123 Print Proxy App

ID Card Printing · https://www.id123.io/knowledgebase/what-printers-are-compatible-with-the-id123-print-proxy-app/

Print ID Cards from the Cloud with ID123's Print Proxy App

The ID123 Print Proxy App allows institutions and businesses to print ID cards from the cloud directly to a local ID card printer. This app connects seamlessly with the ID123 ID Management System (IDMS) to retrieve print jobs and send them to a supported printer on your local network.

To ensure smooth operation, the ID123 Print Proxy App is designed to work only with specific ID card printer models from approved manufacturers. If your printer is not on the list, it will not function with the Print Proxy App.

Interested in Supporting Your Printer Brand?

If you're a printer manufacturer with a mobile print SDK, we'd love to hear from you. Contact us to explore how your card printers can be added to our list of supported devices.
