HID Fargo Connect Integration Guide

Create advanced physical ID card designs and trigger print jobs.

Important!

You must have created at least one digital card template in your account with your desired card fields. If you need assistance creating a digital card template, you can reference the following article.

Creating a New Card Template Knowledge Base Article.

The fields on your digital card template will later be used to create your print template design.

Field Mapping 13

Table of Contents (continued)

Setting an Active Print Template

Navigate to the “Card Records” page 14

Select an Card Template 15

Printing an ID Card

View Card Records 16

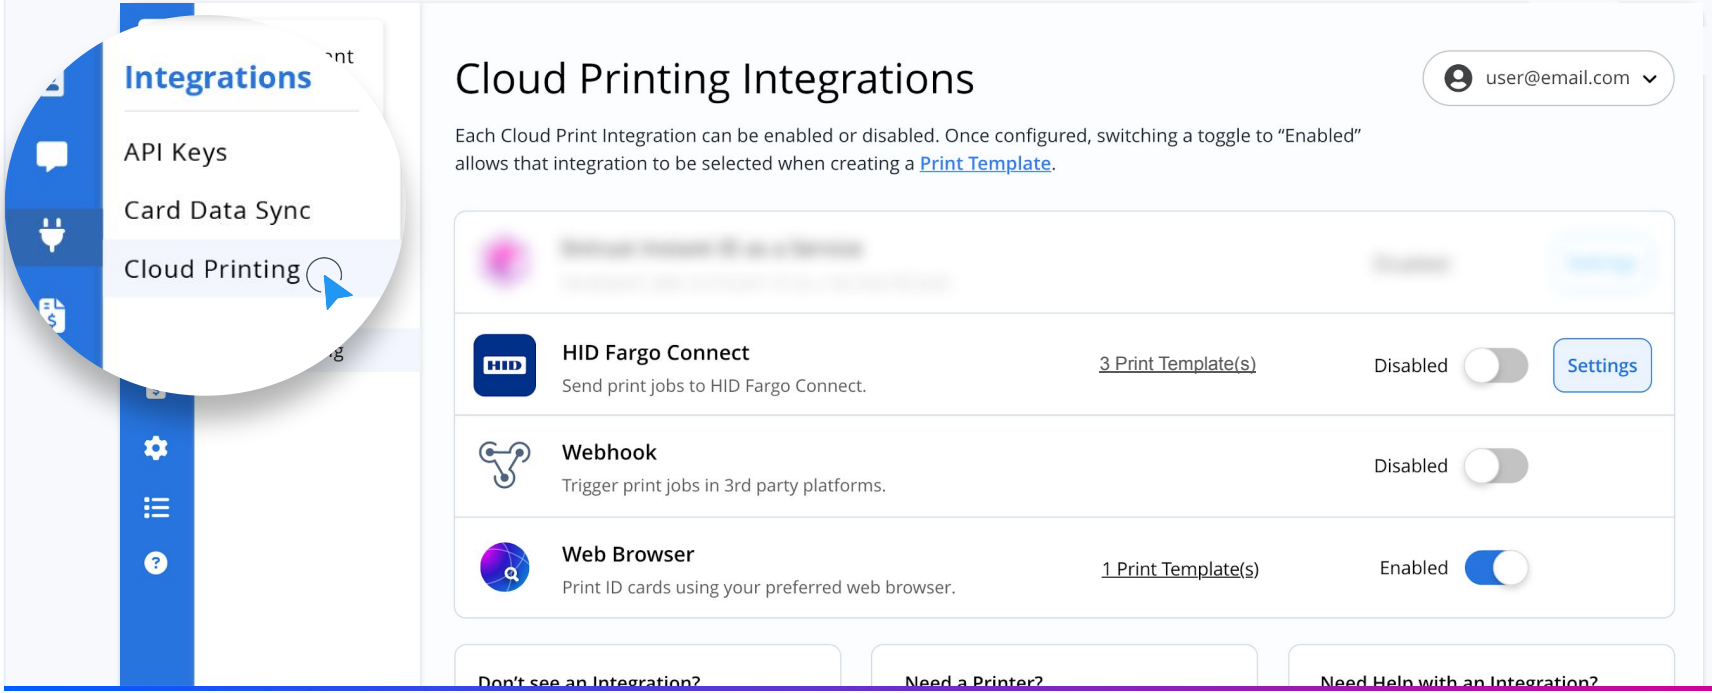
Adding Card Records (optional) 17

Requesting a Print Job 18

View Print Queue 19

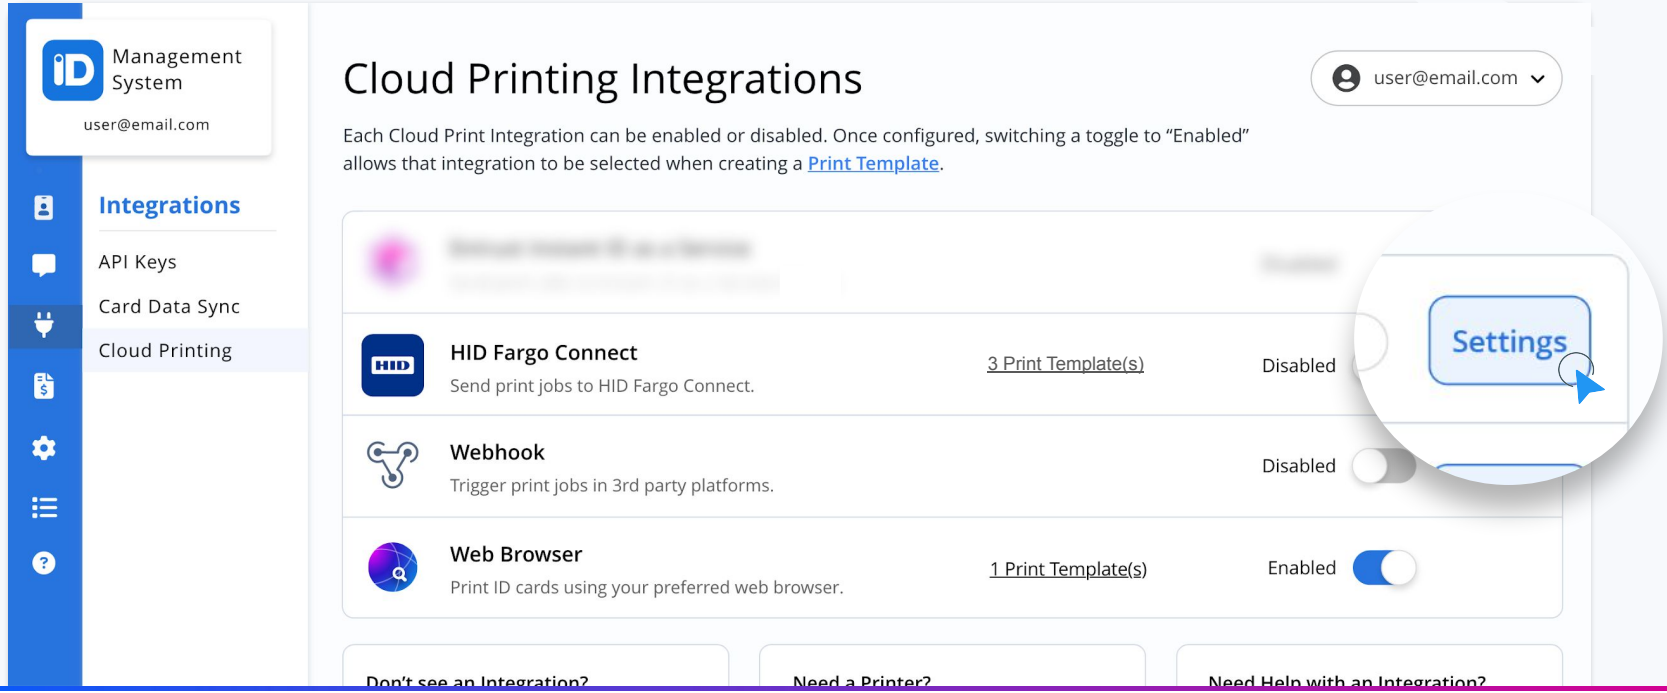
Step 1: Navigate to the “Cloud Printing” Page

When you are ready to configure your HFC integration, navigate to the “Cloud Printing” page under the “Integrations” menu.



Step 2: Select “Settings”

Select the “HID Fargo Connect” integration and click the “Settings” button to configure the connection setting to HFC.

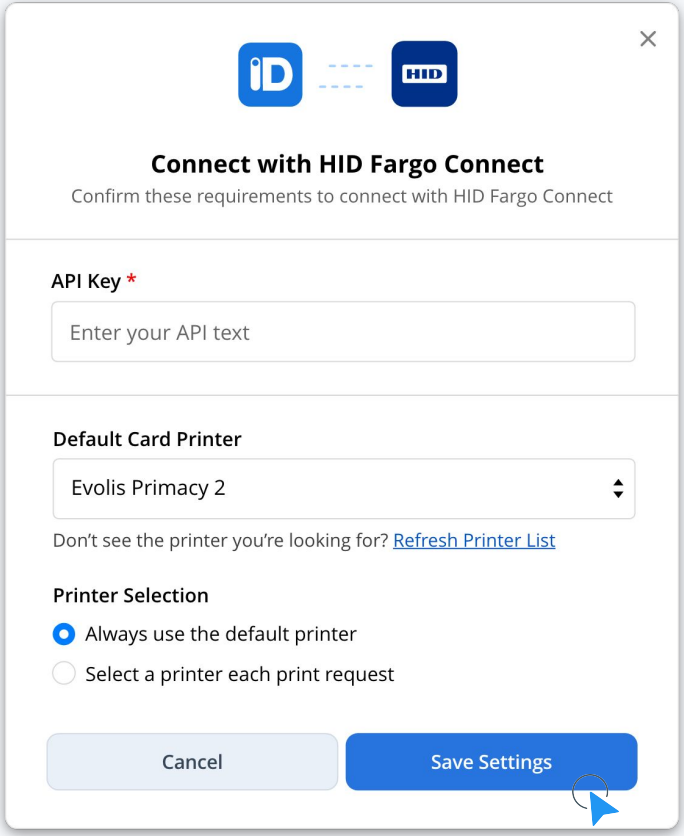


Step 3: Configure the Connection

Configure your connection settings to HFC by entering your API key, selecting your default card printer to use with HFC, and choosing whether to always use the default print or select a printer each time you print a card. When you are done, click the “Save Settings” button.

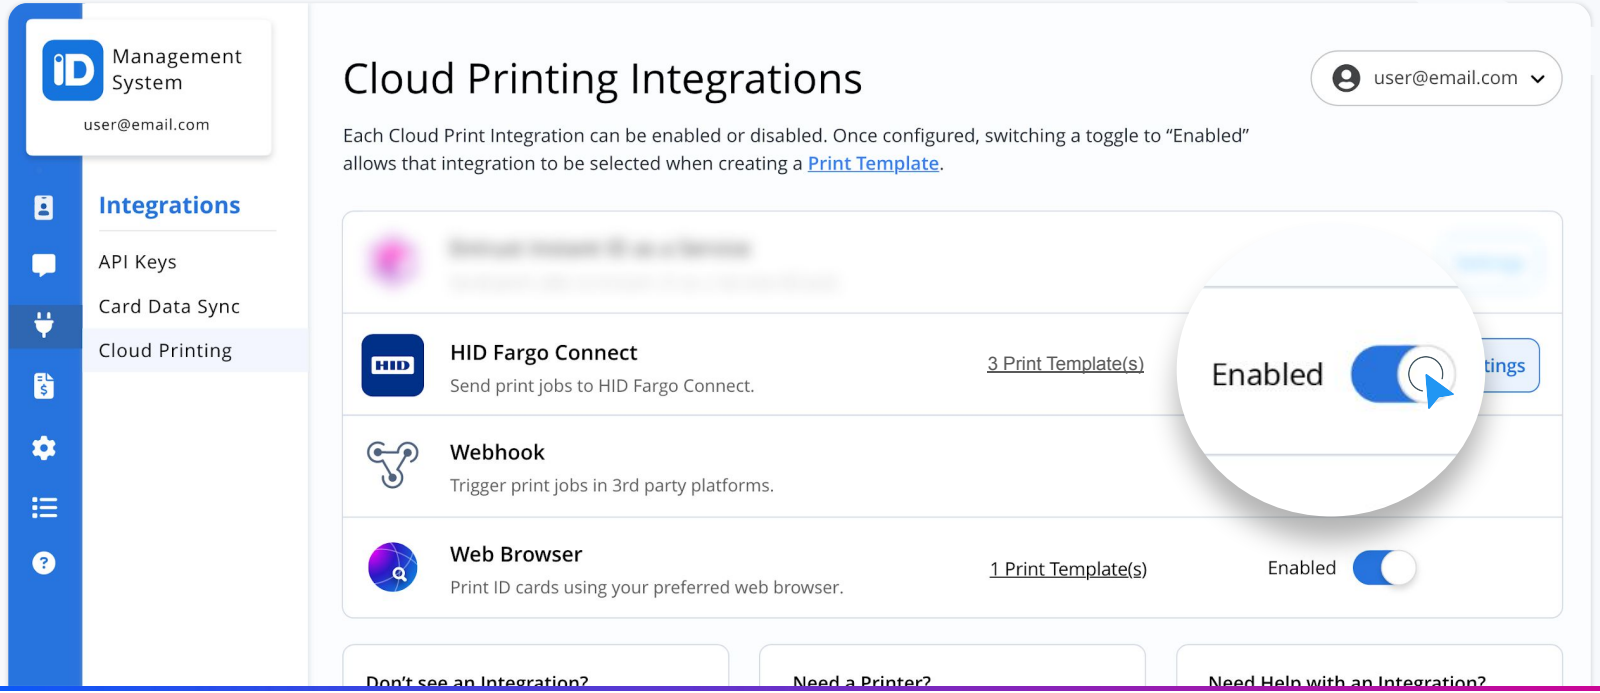
Note: If you need a in-depth guide on how to obtain your API Key from your HID Fargo Connect account you can reference:

How to Obtain an How to Obtain an API Key from your HID Fargo Connect Account Knowledge Base Article.



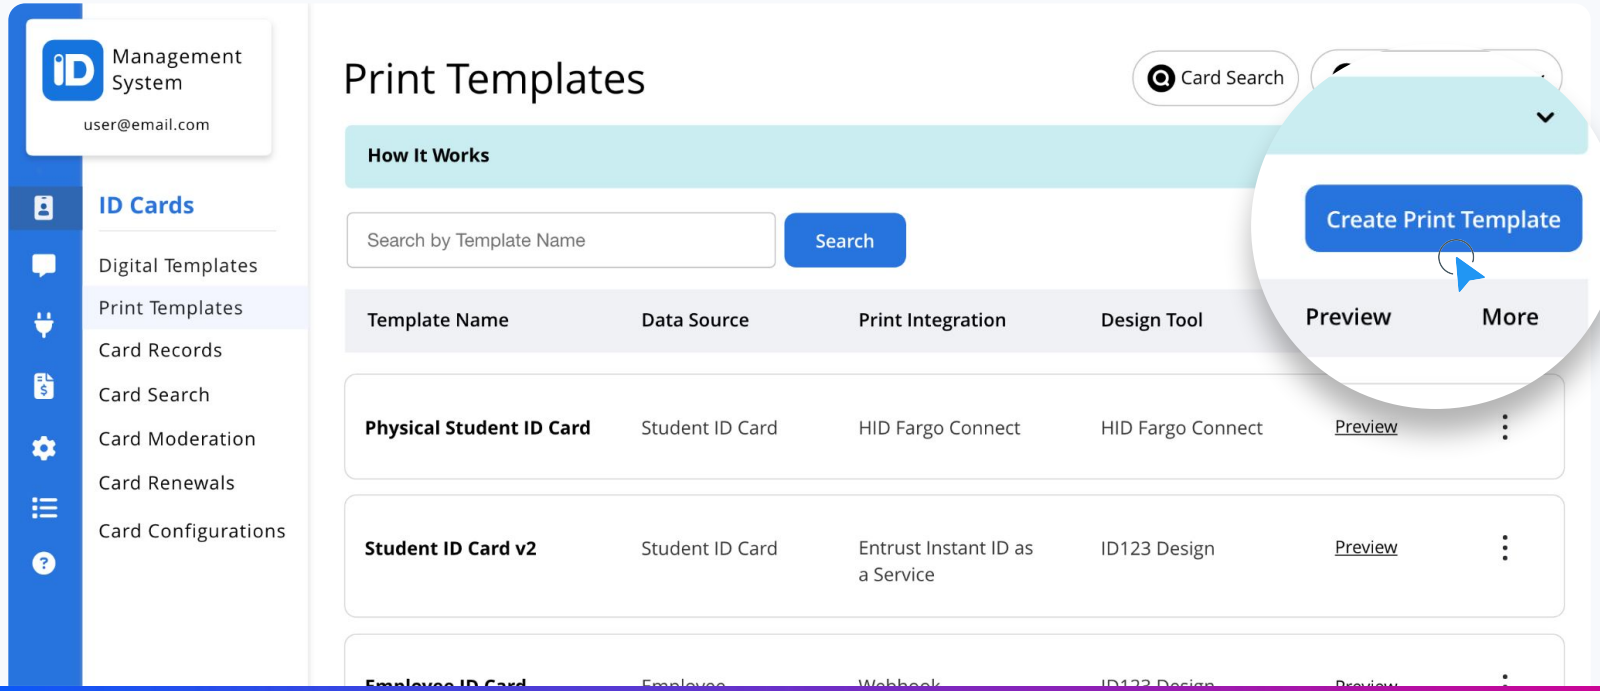
Step 4: Enable the Integration

Enabled the HFC integration by clicking the toggle next to the “Settings” button.



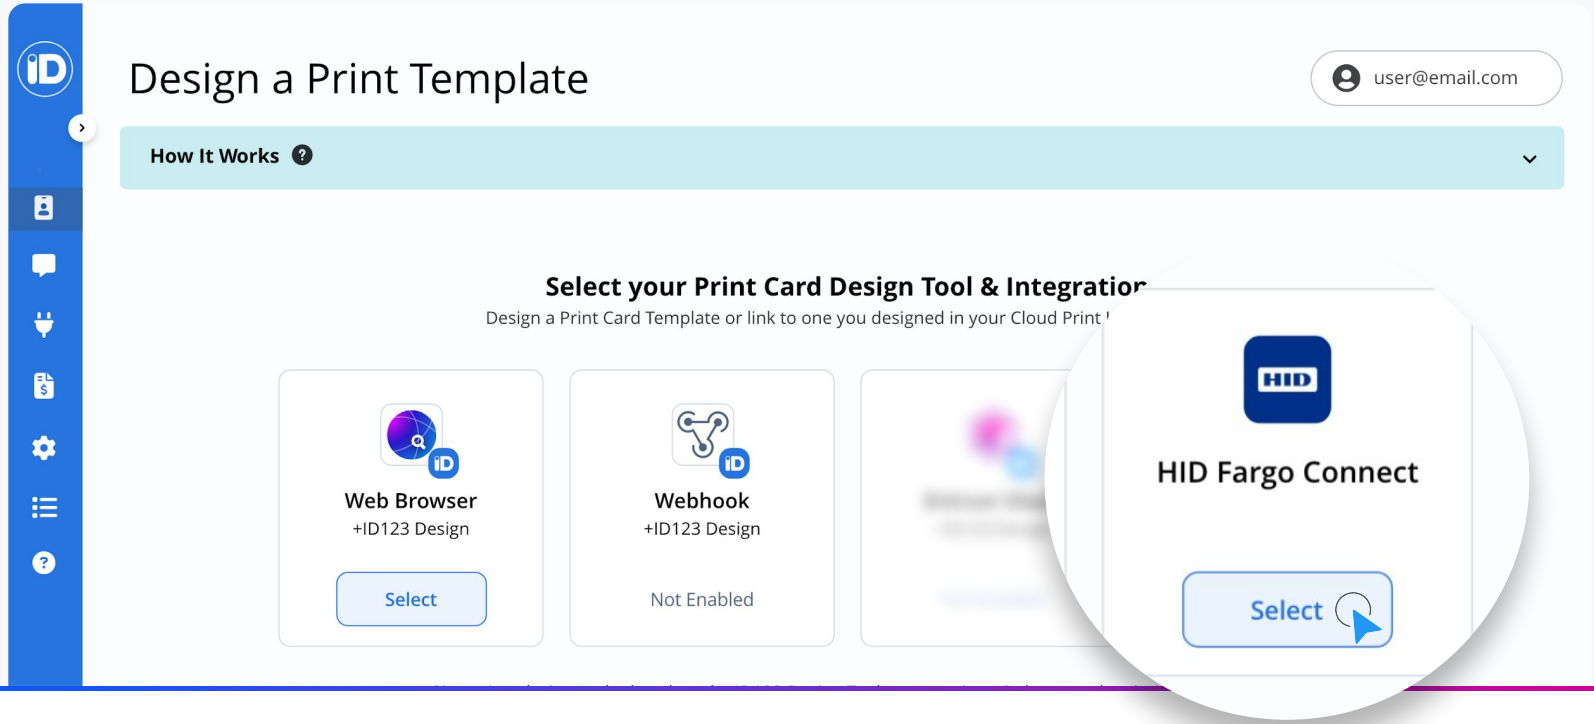
Step 5: Create a Print Template

Navigate to the “Print Templates” page under the ID Cards left menu and click the “Create Print Template” button in the top right corner of your page.



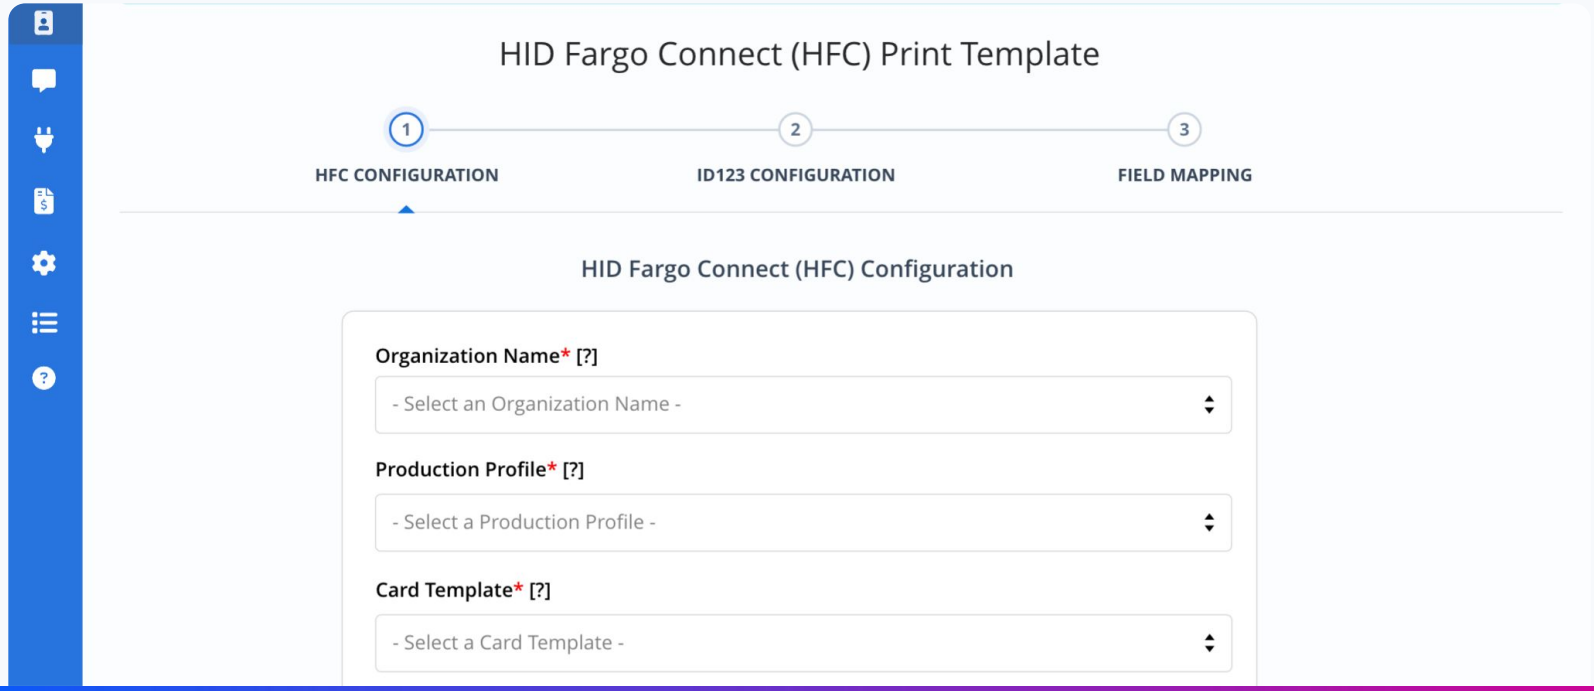
Step 6: Select “HID Fargo Connect”

Select the “HID Fargo Connect” design tool and integration.



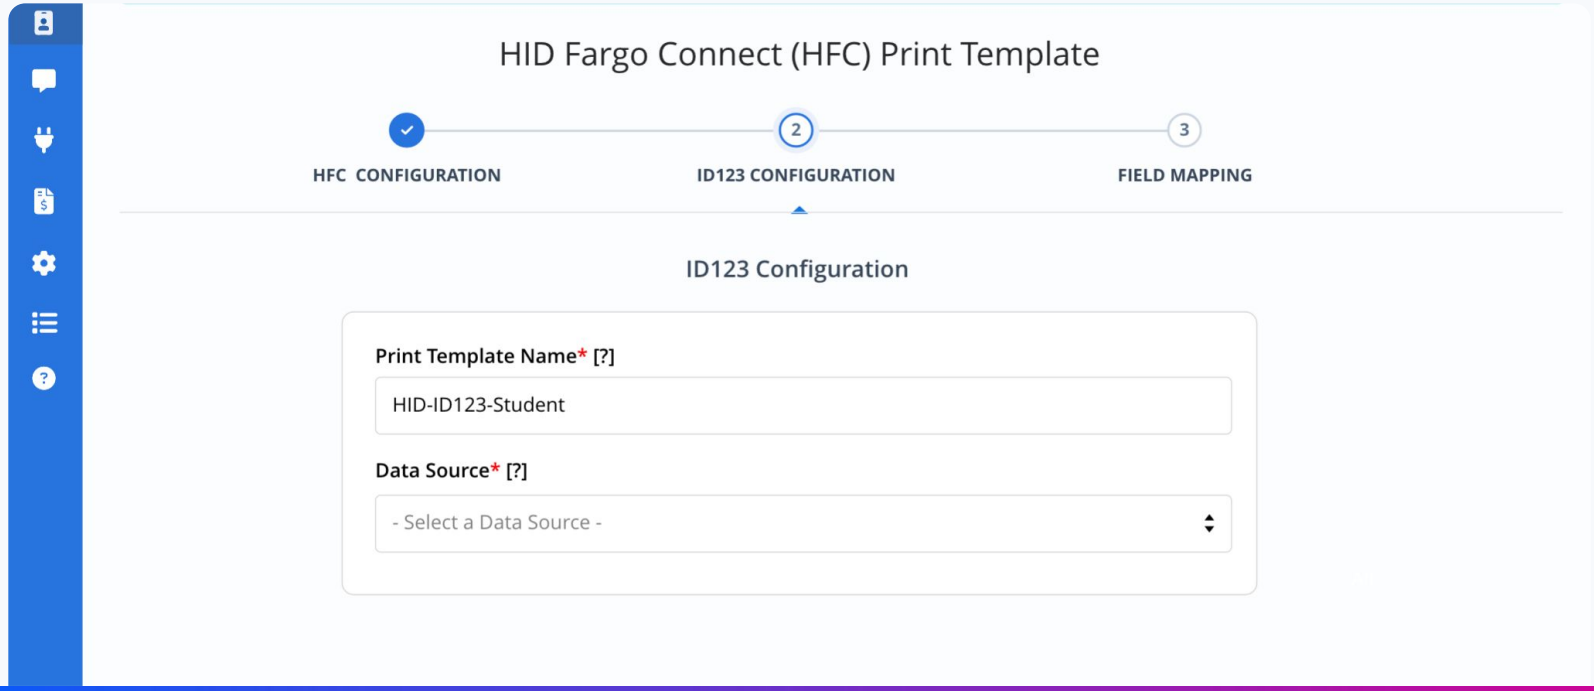
Step 7: HFC Configuration

Under the “HFC Configuration” step, enter the “HFC Organization Name”, “HFC Production Profile”, and “HFC Card Template”. When you are done, click the “Next” button to continue.



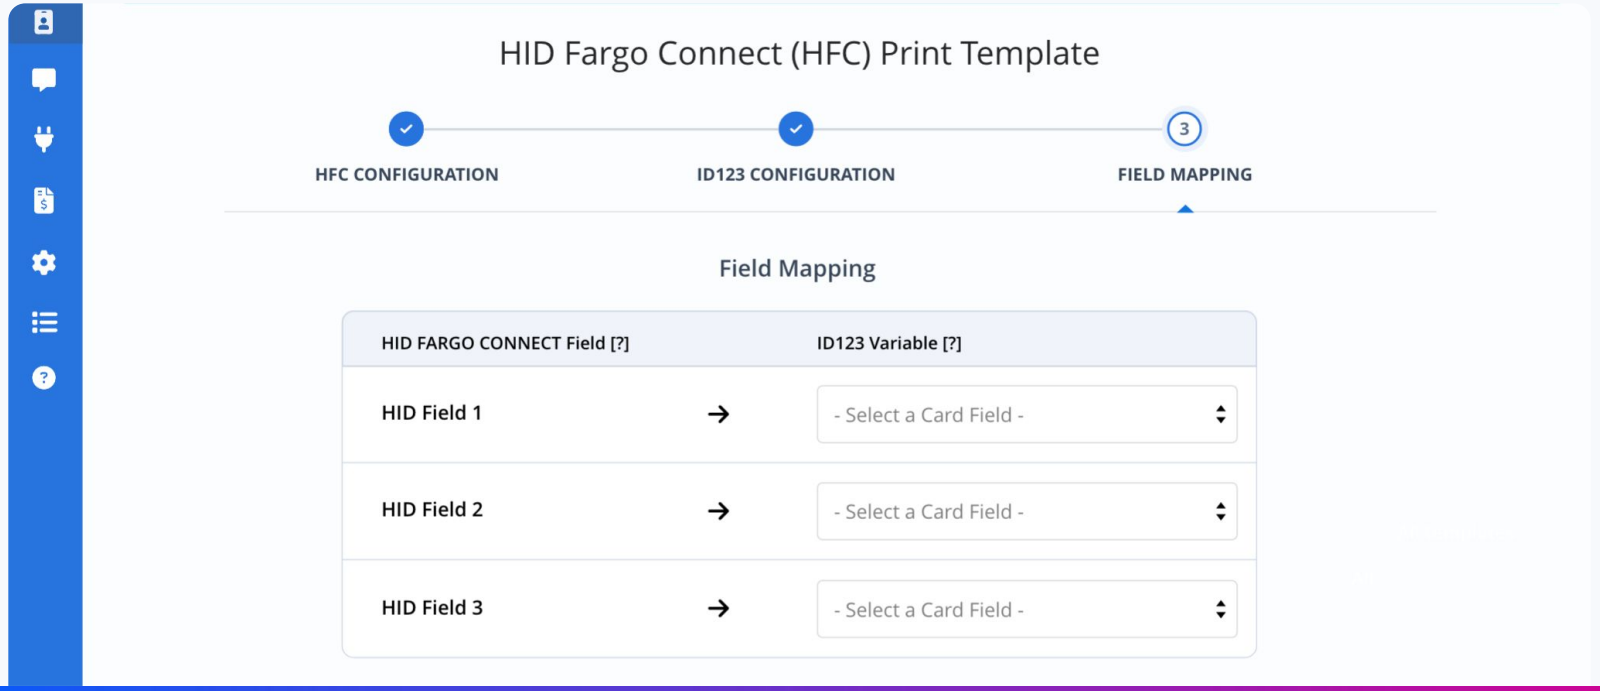
Step 8: ID123 Configuration

Under the “ID123 Configuration” step, enter a name for your ID123 print template and select a data source to use with your print template. The data source will determine which ID123 digital card template fields are used as the basis for designing your print template and can not be changed after being selected. When you are done, click the “Next” button to continue.



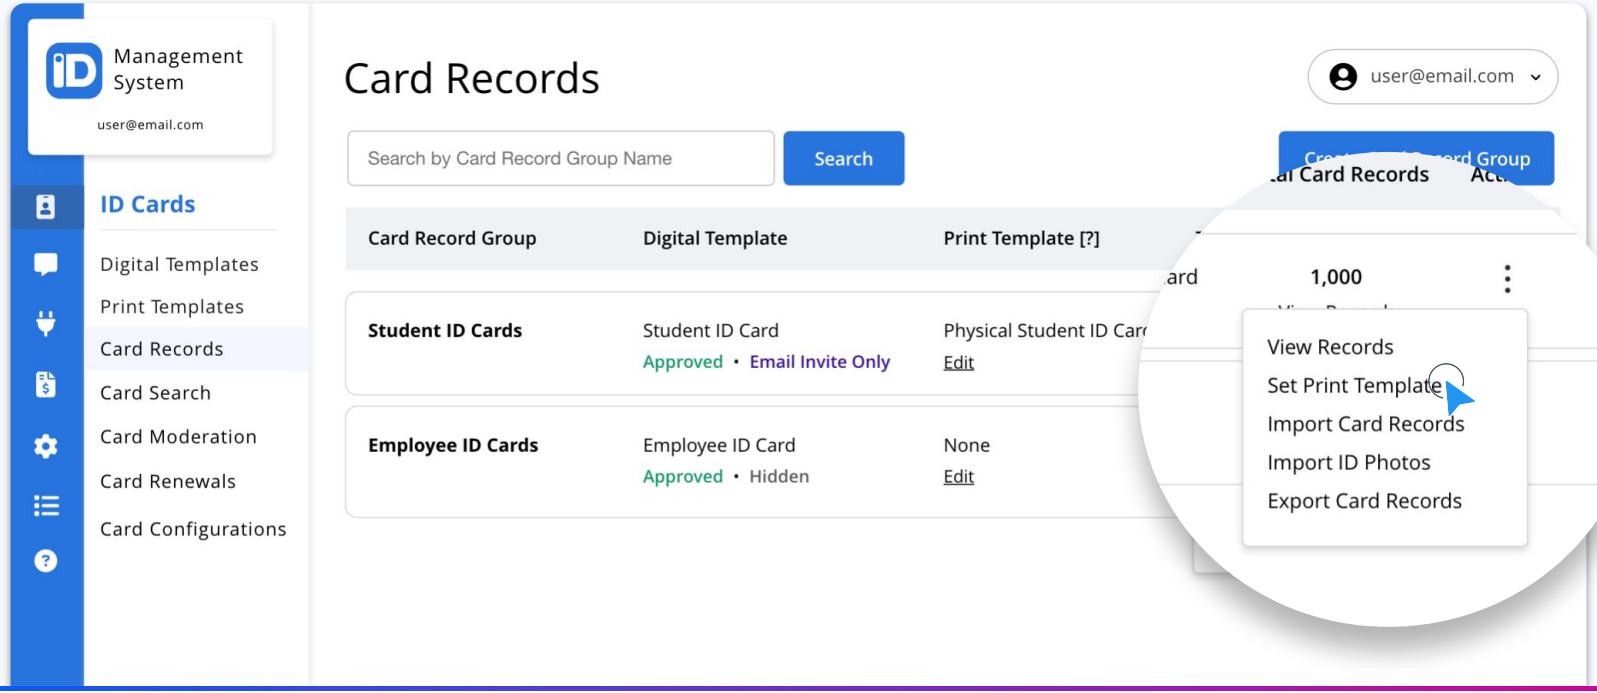
Step 9: Field Mapping

Under the Field Mapping step, map all required HFC cloud print variables to the corresponding ID123 variables. When you are done mapping the variables click the “Save” button to save your configuration.



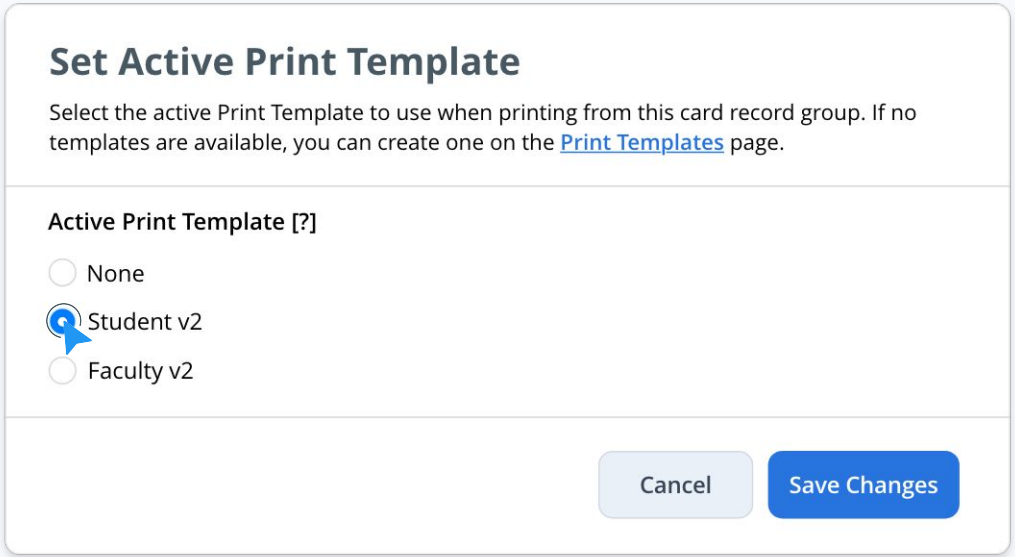
Step 10: Set a Print Template

Navigate to the “Card Records” page under the “ID Cards” menu and next to the card record group you want to use the print template, select the “Set Print Template” option.



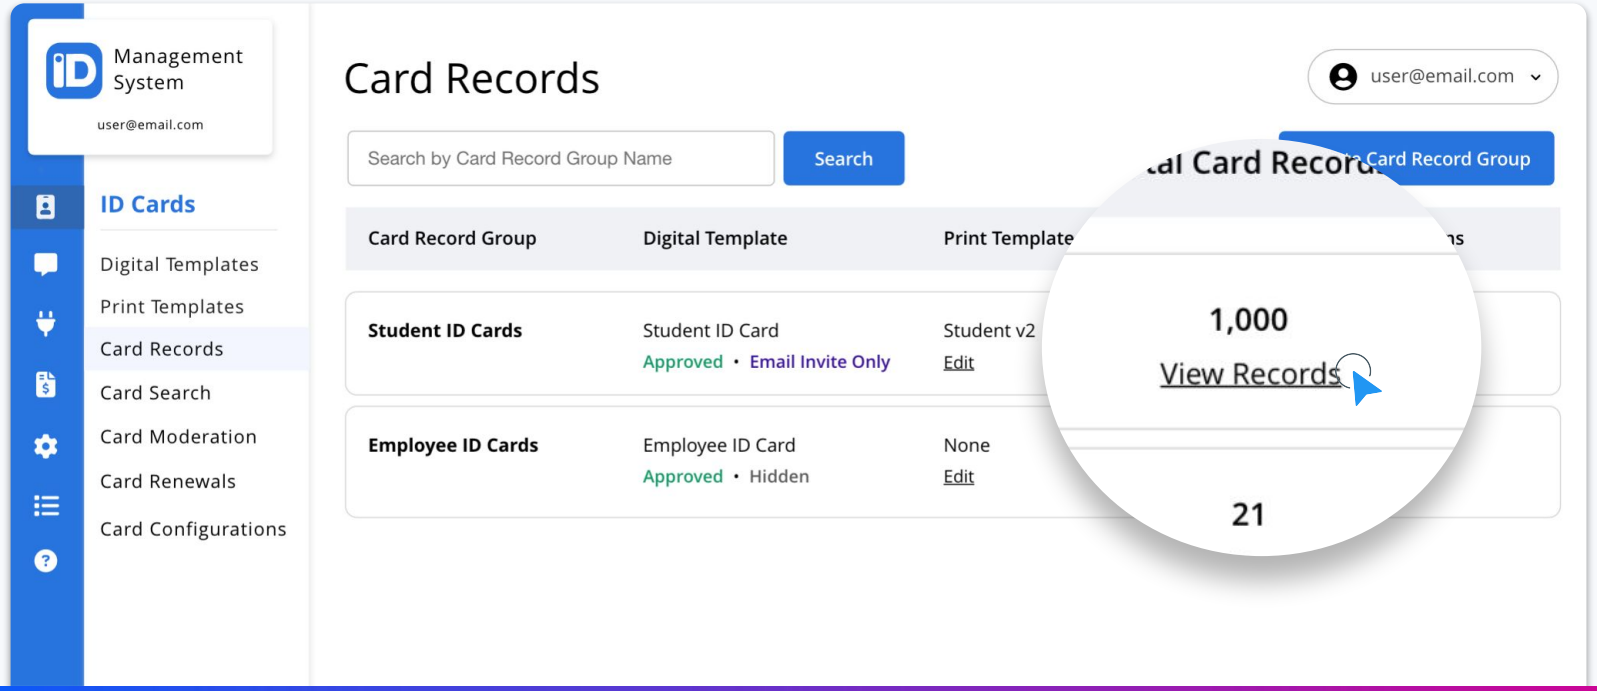
Step 11: Select a Print Template

In the “Set Active Print Template” popup select the print template you wish to use with your card record group. You can only have one print template active with a card record group at a time. When you are finished, click the “Save Changes” button.



Step 12: View Records

Navigate back to the “Card Records” page under the “ID Card” menu and click the “View Records” link in the card record group you just assigned the print template.



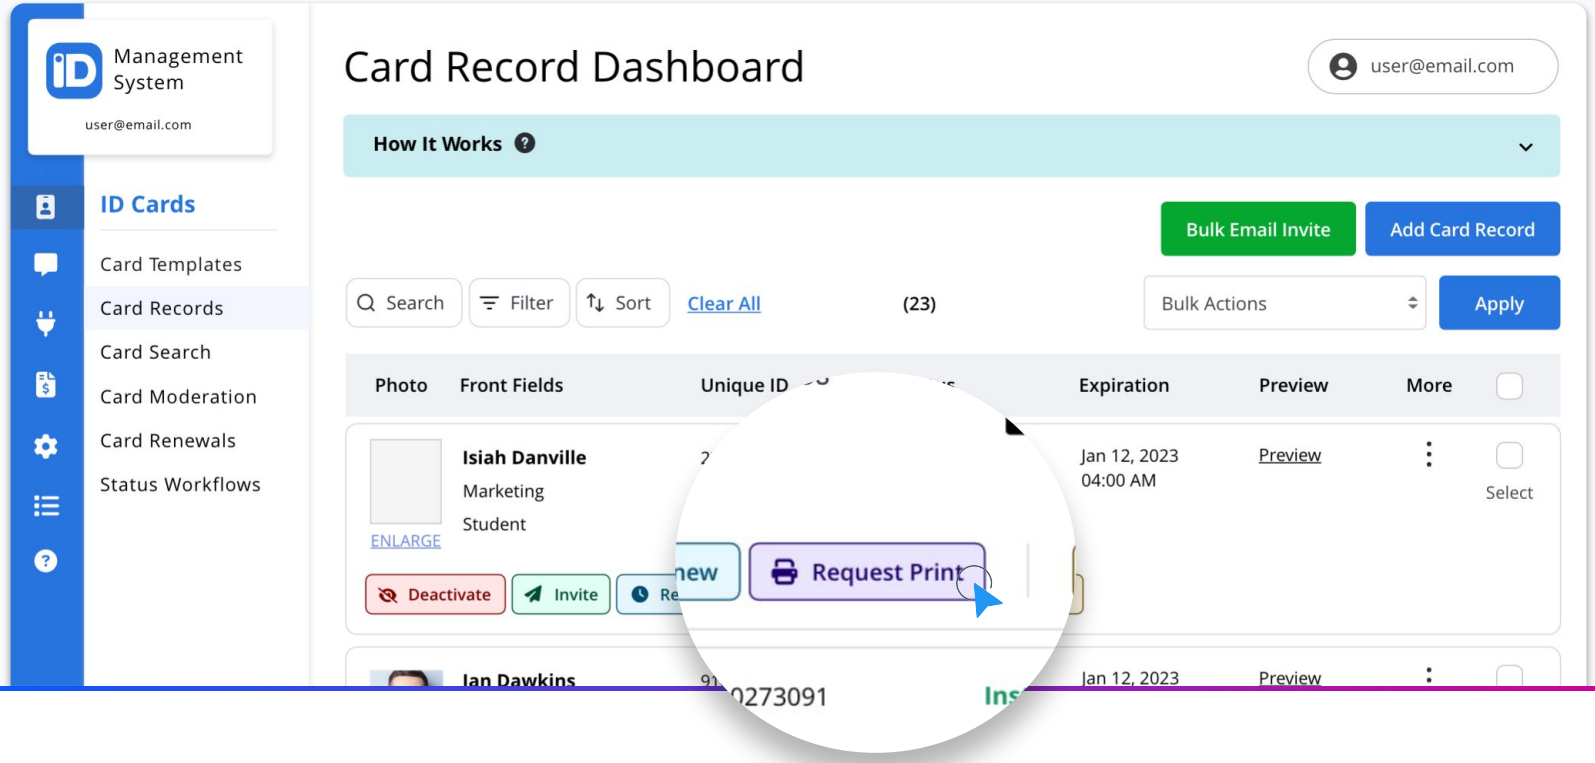
Optional: Add Card Records

If needed you can add card records to your card record group one-by-one or in bulk. If you need assistance adding card records to your card record group, you can reference the following knowledgebase articles.

Importing New Card Records in Bulk via CSV or Adding Card Records One by One

Step 13: Request Print

Once you are on the “Card Record Dashboard”, click the “Request Print” button next to the desired card record you want to print.



Step 14: View Print Queue

Once you are on the “Card Record Dashboard”, click the “Request Print” button next to the desired card record you want to print.

Note: If you need a in-depth guide on what each job status means in the ID123 print queue you can reference:

ID123 Print Queue Job Status Definitions Knowledge Base Article.
